

Note : this id which we are passing to the buyerMgr are come from the client and the client should get this id from the authentication system so in front of of smartBidder system we will have one authentication service which will act as an api gateway or else

I can create a new userMgr which will store userId with respect to the email or phone number where phone number or the email will be my primary key and the I will have the auth inside the smartBidder which will decode the http request then auth the user and call the functions in this smartBidder

- what buyer can do :
1. buyer can register himself
 3. buyer can bid
 4. buyer can withdraw
 5. what about the payment ?
 6. can one bider bid for multipleTimes for same bID ?

- what seller can do :
1. seller can register himself
 2. seller can see the products which he has added
 3. seller can start the bid
 4. seller can complete the bid
 5. seller can stop the bid
 6. can we make the bid on the basis of time instead of the seller ?

- guest user
1. buyer can see the running bids
